

SCRATCHES

Scratches are inevitable, no matter how well you look after your car or try to avoid them, they happen!

WHEN CAN WE REPAIR A SCRATCH?

Traditionally a repairable scratch is a single scratch to the top and clear coat of the paint which is no longer than 75mm in length. These scratches can be fixed by using the brush touch or flowpen technique or by simply polishing the scratch out if possible. Please keep in mind that only the repair area will be polished. Due to the repair technique used no, repairs to scuff-marks or any series of scratches can be undertaken.
